Precision Calibration

GaugeCalHP is a self-contained, precision hydraulic pressure comparator intended for the calibration of pressure gauges, transmitters, sensors, and safety valves rated up to 15 000 psi / 1000 bar. You may fill the comparator with your choice of water or oil, or use without fluid up to 400 inH₂O.

The GaugeCalHP is much faster than deadweight testers and most automated pressure controllers; and it's so quick and easy to use, it's ideal for calibrating those low cost gauges that are often overlooked for ISO9000 compliance.

Systems

CrystalCalHP calibration systems are available in two configurations: basic and expanded systems. The expanded systems include three ultra-rugged, intrinsically safe XP2i digital test gauges. With its 0.1% of reading accuracy, XP2i has long been the industry standard, and the world's most popular test gauge.

XP2i

Accuracy

0 to 20% of Range	±(0.02% of Full Scale)
20 to 110% of Range	±(0.1% of Reading)
Vacuum	±(0.25% of Full Scale*)

* Full Scale = -14.5 psig.

Includes all effects of linearity, hysteresis, repeatability, temperature, and stability for one year.

All models indicate vacuum, but vacuum specification applies to 15 psi, 30 psi, 100 psi, and 300 psi models only.

Not recommended for continuous use below -14.5 psi.

Refer to the [XP2i-DP data sheet](#) for gauges that are intended for continuous high vacuum use.

Of Reading Accuracy

The three gauges included in the expanded CrystalCalHP systems provide ±(0.1% of reading) accuracy from 200 psi /14 bar /1400 kPa to 15 000 psi /1000 bar /100 000 kPa.

The diagrams below show the “of reading” range of each gauge.

For detailed specifications see the Data Sheets at crystallengineering.net/gaugecalhp and crystallengineering.net/xp2i.

- Unneeded pressure units may be disabled via the RS-232 connector using ConfigXP software.
- kPa models can display pressure in kPa, MPa, and bar (or mbar) only. psi and bar models can display all available units.
