STS Series
Superior Temperature Reference Sensors
STS SUPERIOR TEMPERATURE REFERENCE SENSORS are a series of high quality sensors, ideal for industrial temperature calibration applications where accuracy and long-term stability are important. STS sensors are based on more than 50 years of industrial temperature sensor manufacturing experience.

Features

The main requirement of a reference sensor is stability: The less the sensor drifts, the lower the measurement uncertainty. All JOFRA Superior Temperature Reference Sensors are economical and offer fast response times, low immersion depths, compact physical sizes, and specified low drift rates — even at high temperatures. These are all important considerations when selecting a reference sensor.

In addition to the standard straight sensors, we offer a special cable type reference sensor, permitting the sensor to be positioned throughout the depth of the well in a dry block (for example) under a sanitary flange. In addition, we have a specific series of intelligent sensors developed for use with the DTI050 reference indicator.

Key Features

- **Wide Temperature Range**
  -150 to 700°C (-238 to 1292°F). A single sensor may cover the complete temperature range.

- **Fast Response Time**
  Ensures correct monitoring of temperature stability in liquid baths or dry-block calibrators.

- **Specified Low Drift**
  Maintains a minimal uncertainty budget over the entire period between re-calibration intervals. Allows for easier recalibration scheduling.

- **Calibration Certificate**
  Wide choice of accredited and traceable certificates.
Measuring Temperature with JOFRA Reference Sensors

The JOFRA STS-050 A probes are designed for fast and accurate, traceable calibration of temperature. STS-050 can be used for measuring and calibration with AMETEK DTI Series, PTC B & C Series, RTC B & C Series, HPC Series, ATMi and ASC series.

Standard delivery includes international traceable calibration certificate, and accredited (ISO/EN/IEC 17025) calibration certificate can be chosen by selecting calibration option H. Several connection options can be selected, to adapt our wide range of calibrators.

**Standard Delivery**

STS-050 A sensor with handle

- Sensors delivered in carton box
- Traceable calibration certificate, 7 calibration points from -45 to 400°C
- Cable – according to order number
- User manual.

**Specifications**

**Dimensions**

Reference A ........................................ 250 mm (9.84 in)  
Reference B ........................................ 4 mm (0.16 in)  
Reference C ........................................ 140 mm (5.51 in)

**Temperature Range**

All Sensors ......................................... -50 to 400°C (-58 to 752°F)

**Accuracy**

Hysteresis (1) @ 0°C (32°F) ....... 0.01°C (0.02°F)

Long Term Stability (2) @ 0°C (32°F) ....... typical 0.014°C (0.025°F)

Repeatability (3) @ 0°C (32°F) ....... 0.005°C (0.009°F)

(1) When used in the range -50 to 400°C (-58 to 752°F).
(2) When exposed to 400°C (752°F) for 100 hours. Stability will depend on actual use of the sensor.

**Sensing Element**

Type .............................................. Pt100

Nominal Resistance @ 0°C (32°F) ............ 100 Ohms

Temperature Coefficient α100 = 0.00385 1/°C

**Minimum Immersion Depth**

STS-050 A – 4 mm (0.16 in) ............. 100 mm (3.94 in)

**Self-Heating Effect**

0.06 °C/mW (0.11 °F/mW)

**Response Time**

STS-050 A – 4 mm (0.16 in): t0.5 (50%), .................. 8 seconds

STS-050 A – 4 mm (0.16 in): t0.9 (90%), .................. 26 seconds

**Liquid in motion v = 0.4 m/s.**

**Electrical Connections**

Cable .............................................. 4-wire

Connection ... See "Cable Length and Termination" options below

**Insulation Resistance**

@ 23°C (73°F) ............. 100 Gohm  
@ 400°C (752°F) ............. 70 Mohm

**Outer Tube**

Inconel 600

**Operating Conditions**

Sensor, Connection, and Cable ............ Max. 70°C (158°F)

Storage Temperature ............ -20 to 70°C (-4 to 158°F)

Humidity .................. 0 to 90% RH

Protection Class ............. DIN 40050 IP-50

---

**Ordering Information**

**Sample Order Number**

STS050A250DF ... 4 mm STS-050 reference sensor, straight 250 mm, cable length 1 m (3.3 ft) with REDEL connector for DTI050, and NPL traceable calibration certificate.
Quality Defined

It is not easy to make a good quality reference sensor. The main requirement of a reference sensor is stability. This means minimal drift as a function of operating time at the actual temperature. The less the sensor drifts, the lower the measurement uncertainty.

Standard Diameter — Fast Response

The STS-100 A/B series has a relatively small diameter: STS-100 A is 4 mm/0.16 in, and STS-100 B is 6.35 mm/0.25 in. This leaves optimum space for sensors-under-test in the dry-block, and ensures a fast response time. A fast reacting sensor will optimize the measurement information.

Reduced Hysteresis and Drift

The sensing element is comprised of a pure platinum coil. This coil is suspended in a way that minimizes stress and ensures a near zero hysteresis value.

The main reason for drift within a sensor assembly is impurities within the element, especially at temperatures above 350° C (660° F). All internal parts must be cleaned thoroughly. AMETEK has developed a unique cleaning method for the internal bore of the Inconel® sheath. The platinum sensor is embedded within an ultra-clean, temperature resistant ceramic; and assembly of the components is performed in a clean room. These precautions ensure minimum contamination of the element during use, and provide the user with the best possible performance.

Aging /Annealing

Once the sensors are assembled, they are subjected to a long approval process. This includes mechanical stress reduction of the entire assembly as well as aging the sensor element itself. The purpose of aging the sensor is to remove the initial drift.

The procedure involves heating the sensor up to 650° C (1202° F) and holding it for 1 hour before cooling down. This process is repeated over a period of several days. The resistance is then measured at 0° C (32° F) and recorded. The sensor is again heated up to 650° C (1202° F), and this time the temperature is held constant for 100 hours.

Finally the output from the sensor is again measured at 0° C (32° F) and recorded. The difference between the first and second measurement is recorded. The difference between these two measurements is our verification of the stability qualities of the sensor. To be accepted for final calibration and certification, the sensor must meet our minimum tolerance, which we document in a quality certificate.

Reduced Isolation — Resistance-Error

Electrical isolation resistance (parasite-resistance-error) when measured at the highest operating temperature should be as high as possible. A low isolation resistance would cause the output signal to be incorrect in relation to the temperature. JOFRA STS-100 A/B series sensors meet the IEC-751 requirements of isolation resistance by several hundred percent.

The Final Quality-Certificate-Check

Upon completion of every certificate, after final calibration of the sensor, examination and approval cycles are performed according to our established procedures. The critical verification is to ensure that the difference between the initial and the final 0° C (32° F) measurement on the certificate meets our minimum tolerance. These requirements are based on a vast amount of data, which has been evaluated statistically. This value indicates if the sensor has a sufficient long-term stability. We also check that the linearization coefficients have values that correlate to an acceptable curve sequence in accordance with our requirements.

Certification

The final documentation on sensors is the calibration certificate. JOFRA sensors have the following calibration options.

Accredited Certificate (Standard) Traceable to the European Accreditation Organization. Temperature range from -45 to 650° C (-49 to 1202° F).

The certificate contains a minimum of 6 temperature points starting and ending at 0° C (32° F). The certificate also contains calculated linearization coefficients.

Delivery Without Certificate — Annealed Only (Optional) In some cases, the customer may prefer to calibrate the sensor themselves. It is possible to purchase the sensor without any certification. We do not recommend this option because we are not able to complete the final "quality-certificate-check."
**Specifications**

**Dimensions**
- **Reference A**
  - Overall diameter: 4 mm (0.16 in)
- **Reference B**
  - Overall diameter: 6.35 mm (0.25 in)

**Temperature Range**
- All Sensors: -150 to 650° C (-238 to 1202° F)

**Accuracy**
- Hysteresis @ 0° C (32° F): 0.01° C (0.02° F)
- Long Term Stability @ 0° C (32° F): typical 0.014° C (0.025° F)
- Repeatability @ 0° C (32° F): 0.002° C (0.0036° F)
  - (1) When used in the range -90 to 650° C (-130 to 1202° F).
  - (2) When exposed to 650° C (1202° F) for 100 hours. Stability will depend on actual use of the sensor.

**Sensing Element**
- Type: Pt100
- Nominal Resistance @ 0° C (32° F): 100 Ω
- Temperature Coefficient: α100 = 0.00385 1/°C

**Minimum Immersion Depth**
- STS-100 A — 4 mm (0.16 in)
- STS-100 B — 6.35 mm (0.25 in)

**Self-Heating Effect**
- 0.06° C/mW (0.108° F/mW)

**Response Time**
- STS-100 A — 4 mm (0.16 in)
  - τ0.5 (50%): 8 seconds
  - τ0.9 (90%): 26 seconds
- STS-100 B — 6.35 mm (0.25 in)
  - τ0.5 (50%): 18 seconds
  - τ0.9 (90%): 44 seconds

**Liquid in motion v = 0.4 m/s.**

**Electrical Connections**
- Cable: 4-wire plus shield
- Connection: LEMO goldplated

**Insulation Resistance**
- @ 23° C (73° F): 100 Gohm
- @ 650° C (1202° F): 170 Mohm

**Outer Tube**
- Inconel 600

**Operating Conditions**
- Sensor, Connection, and Cable: Max. 70° C (158° F)
- Storage Temperature: -20 to 70° C (-4 to 158° F)
- Humidity: 0 to 90% RH
- Protection Class (connectors): DIN 40050 IP-50

**Shipping Dimensions**
- LxWH: 750x150x140 mm (29.5x5.9x5.5 in)
- Shipping Weight, including packing: 3.0 kg (6.6 lb)

**Standard Delivery**
- STS-100 A/B sensor
- Sensors delivered in aluminum case
- Accredited calibration certificate, 6 points from -45 to 650° C
- Cable — according to order number
- User manual

**Accessories**
For a complete list of accessories, please see page 11.

**Sample Order Number**
- STS100A350BH... 4 mm STS-100 reference sensor, straight 350 mm, cable length 2 m (6.6 ft)
  - with LEMO connector, and accredited calibration certificate.
Cable Type

For sanitary sensor calibration, JOFRA has also designed a special cable type reference sensor, the STS-102 A. Due to the small size and flexible connection, the design permits positioning of the sensor throughout the depth of the well in a dry-block, eg. under a sanitary flange.

The reference sensor must be placed at the same level and in parallel with the sensor-under-test as indicated in the illustration above. The illustration shows calibration of a sanitary sensor. The sensor is in contact with the insert.

Standard Delivery

STS-102 A sensor ■ Sensors delivered in plastic case ■ Accredited calibration certificate, 6 points from -45 to 155° C ■ Cable – according to order number ■ User manual ■ Calibration Tube.

Order No .................. 127279
ETC-400 R Calibrator Sensor

JOFRA has designed a special 3 mm STS reference sensor for the ETC-400 R calibrator. The sensor can be used as a reference sensor when a higher accuracy is required, or for recalibration of the ETC-400 R. Due to the small immersion depth requirement of the sensor, it can be placed under the surface of the target.

Standard Delivery

STS-103 B sensor ■ Sensor delivered in aluminum case ■
Accredited calibration certificate, 6 points from -45 to 400°C ■
Cable – according to order number ■ User manual.

Accessories

### Sample Order Number

STS150A935EH . . . 4 mm STS-100 reference sensor, 90° angled, 165 mm, cable length 0.5 m (1.6 ft) with LEMO/Redel connector, and accredited calibration certificate.
## Specifications

### Dimensions

| Reference A (915) | Overall diameter 4 mm (0.16 in) | 145 mm (5.7 in) |
| Reference A (916) | Overall diameter 6.35 mm (0.25 in) | 179 mm (7.05 in) |
| Reference B | Overall diameter 4 mm (0.16 in) or 6.35 mm (0.25 in) | 211 mm (8.3 in) |
| Reference C (915) | Overall diameter 4 mm (0.16 in) | 245 mm (9.65 in) |

| Reference A (916) | Overall diameter 6.35 mm (0.25 in) | 360x50x290 mm (14.2x1.9x11.4 in) |
| Reference B | Overall diameter 6.35 mm (0.25 in) | 4 mm (0.16 in) |
| Reference C (915) | Overall diameter 6.35 mm (0.25 in) | 6.35 mm STS-200 reference sensor, solid, with intelligence |

| Temperature Range |
| STS-200 A/B | -65 to 160°C (-85 to 320°F) |
| STS-200 A/B | -65 to 160°C (-85 to 320°F) |
| STS-200 A/B | -100 to 155°C (-148 to 311°F) |
| STS-200 A/B | -65 to 180°C (-85 to 356°F) |
| STS-200 A/B | 0 to 250°C (32 to 482°F) |
| STS-200 A/B | 0 to 700°C (32 to 1292°F) |

### Accuracy

- **Hysteresis** \[ @ 0°C (32°F) \] [32°F] 0.01°C (0.02°F)
- **Long Term Stability** \[ @ 0°C (32°F) \] [32°F] typical 0.016°C (0.029°F)
- **Repeatability** \[ @ 0°C (32°F) \] [32°F] 0.002°C (0.0036°F)

1. When used in the range shown above.
2. When exposed to the maximum temperature shown above for 100 hours.

### Sensing Element

- **Type** \[ Pt100 \]
- **Nominal Resistance @ 0°C (32°F)** [32°F] 100 Ω
- **Temperature Coefficient** \[ \alpha \] [32°F] $=0.00385 \ 1/°C$

### Minimum Immersion Depth

- **STS-200 A** | 4 mm (0.16 in) | 100 mm (3.9 in)
- **STS-200 B** | 6.35 mm (0.25 in) | 110 mm (4.3 in)

### Self-Heating Effect

**0.06°C** \[ 0.108°F/mW \]

### Response Time

- **STS-200 A** | 4 mm (0.16 in) | \( \tau_{0.5} \) (50%): 8 seconds
- **STS-200 A** | 4 mm (0.16 in) | \( \tau_{0.9} \) (90%): 26 seconds
- **STS-200 B** | 6.35 mm (0.25 in) | \( \tau_{0.5} \) (50%): 18 seconds
- **STS-200 B** | 6.35 mm (0.25 in) | \( \tau_{0.9} \) (90%): 44 seconds

### Electrical Connections

- **Cable** | 4-wire plus shield
- **Connection** | Redel

### Outer Tube

- **Inconel 600**

### Operating Conditions

- **Sensor, Connection, and Cable** | Max. 70°C (158°F)
- **Storage Temperature** | -20 to 70°C (-4 to 158°F)
- **Humidity** | 5 to 90% RH

### interviews

- **Sensor, Connection, and Cable** | 360x50x290 mm (14.2x1.9x11.4 in)
- **Weight, including packing** | 1.0 kg (2.2 lb)

### Standard Delivery

- **STS-200 A/B sensor** | Sensors delivered in plastic case
- **Calibration certificate** | 6 to 7 points
- **Cable** | According to order number
- **User manual** |

### Accessories

For a complete list of accessories, please see page 11.

### Sample Order Number

STS2008925DH ... 6.35 mm STS-200 reference sensor, 90° angled, 182 mm, cable length 2 m (6.6 ft) with LEMO/Redel connector, and accredited calibration certificate.
# Cable Accessories for STS Reference Sensors

**STS-100 & STS-103**

- **122801** ........................................... Cable 0.5m (1.6ft) w/ LEMO to LEMO
- **125522** ................. Cable 2m (6.6ft) w/ LEMO/Redel for DT1050/RTC/PTC
- **65-PT100-LL-CABLE** ............ Cable 2m (6.6ft) w/ LEMO to LEMO
- **65-PT100-LB-CABLE** ............ Cable 2m (6.6ft) w/ LEMO to banana

**STS-120, STS-150, & STS-200**

- **127131** ............ Cable 0.5m (1.6ft) w/ 6-POL LEMO/Redel
- **127285** ................. Cable 2m (6.6ft) w/ 6-POL LEMO/Redel
- **127286** ................. Cable 2m (6.6ft) w/ 6-POL LEMO/Banana
- **127287** ................. Cable 2m (6.6ft) w/ 6-POL LEMO to 4-POL LEMO
- **127288** ............ Cable 0.5m (1.6ft) w/ 6-POL LEMO to 4-POL LEMO
- **127787** ................. Cable 2m (6.6ft) w/ Redel/Redel
